

BALAJI RAGHAVAN

IT PLATFORM ANALYST | ENTERPRISE LICENSING | CLOUD & MICROSERVICES

Bengaluru, India | +91 80560 40561 | balaji.raghavan.mdu@gmail.com

PROFESSIONAL SUMMARY

IT Platform Analyst with 18+ years of experience across healthcare, software licensing and digital payments. Specialises in translating business requirements into scalable enterprise solutions using microservices, cloud platforms, event-driven integration and rules engines. Experienced in licensing and entitlement management, SAP integration, Sentinel EMS/LDK, API management, technical design reviews, release governance, AI-assisted engineering and cross-functional delivery.

CORE EXPERTISE

Architecture & Integration Microservices, SOA, event-driven architecture, REST APIs, Apigee, OAuth 2.0	Licensing Platforms LEM, Sentinel EMS/LDK, FlexNet, legacy key generators, entitlement lifecycle	Cloud & DevOps AWS, Docker, Kubernetes, Jenkins, Kafka, RabbitMQ
Engineering Java/Spring Boot, Python, React/Next.js, C++, Drools, SQL	Delivery & Governance Requirements, solution design, backlog refinement, release planning, ITGC/BIA, security alignment	AI-Assisted Engineering & Productivity GitHub Copilot, Microsoft Copilot, ChatGPT / GPT Models, prompt engineering, AI-assisted coding, AI-generated test cases, AI-driven documentation
AI & Data LangChain, Vertex AI, enterprise AI solutions, RAG (Retrieval-Augmented Generation), intelligent automation, deep learning		

PROFESSIONAL EXPERIENCE

IT Platform Analyst | Philips Private Limited, Bengaluru, India Aug 2021 - Present

- Lead business and technical analysis for the License Entitlement Management (LEM) platform, supporting healthcare business units and enterprise licensing scenarios.
- Translate commercial and non-commercial licensing requirements into solution designs spanning SAP/EMO, Apigee, ITaaP microservices, Kafka, Sentinel EMS/LDK and portal user interfaces.
- Facilitate architecture reviews, requirement grooming, backlog refinement, release planning and stakeholder alignment across product, integration, security, support and vendor teams.
- Contribute to release governance through compliance evidence, ITGC/BIA coordination, cutover planning, knowledge transfer and production-readiness activities.
- Support migration and modernisation initiatives from legacy entitlement and license mechanisms to LDK-based entitlement and licensing capabilities.
- Leveraged Microsoft Copilot, ChatGPT and AI-assisted development tools to accelerate requirements analysis, solution design, API documentation, technical specifications and release readiness activities.
- Utilized Generative AI capabilities for creation of sequence diagrams, pseudocode, user stories, test scenarios, technical documentation and stakeholder communication artifacts.
- Evaluated AI adoption opportunities across licensing and entitlement management platforms to improve delivery efficiency, knowledge management and operational productivity.
- Applied prompt engineering techniques to generate architectural alternatives, integration workflows, business rules and automated documentation for enterprise modernization initiatives.

CURRENT PROJECT: PHILIPS LICENSE ENTITLEMENT MANAGEMENT (LEM) - 2026 MODERNISATION

- CVI commercial upgrade and extension: Define and refine entitlement upgrade flows initiated by SAP, including validation, orchestration, product and feature checks, Sentinel updates and status feedback.
- Non-commercial upgrade portal: Support UI-driven upgrade capabilities for CVI, HPM and related product scenarios, including bulk processing, multi-country handling and platform integrations.
- Legacy-to-LDK migration: Contribute to the transition of existing legacy entitlements and licences to LDK entitlement and licensing models for imaging portfolios such as IGT and DXR.

- End-to-end architecture: Coordinate designs across LEM Portal, Apigee, ITaaP microservices, Kafka, rules processing, Sentinel EMS/LDK and enterprise source systems.
- Release and operational readiness: Participate in design reviews, backlog sessions, security assessments, compliance alignment, cutover planning and production issue analysis for scheduled LEM releases.

Senior Member Technical Staff | Flexera Technologies, Bengaluru, India **Oct 2017 - May 2021**

- Developed microservices and full-stack capabilities using Spring Boot, RabbitMQ, Docker and Next.js for enterprise licensing solutions.
- Integrated licensing front-end and back-end services, supported software monetisation use cases and implemented OAuth-secured Swagger/API interfaces.
- Migrated applications from IBM WebSphere to Liberty and contributed to automated testing and sprint delivery.

Senior Member Technical Staff | PayPal, Chennai, India **Jan 2012 - Sep 2017**

- Delivered full-stack enhancements and vulnerability remediation for payment-domain applications serving multiple business teams.
- Built unit and integration tests using JUnit and Mockito, and supported sprint planning and engineering delivery.

Software Engineer II | Parametric Technology Corporation (PTC), Pune, India **May 2007 - Oct 2010**

- Developed and tested E-CAD software using C++, Qt and SOAP-based web services.

Subject Matter Expert | Amdocs, Pune, India **May 2006 - Mar 2007**

- Developed telecom applications using PowerBuilder and supported domain-focused technical delivery.

SELECTED PHILIPS PROJECTS & ACHIEVEMENTS

- LEM platform: Enterprise licensing and entitlement management integrating business entitlement decisions with technical licence generation and enforcement.
- Legacy Key Generator architecture: Consolidation approach for third-party encryptors supporting medical-device licensing use cases.
- Commercial and non-commercial upgrades: Upgrade, extension, bulk feature update and entitlement lifecycle capabilities across healthcare product portfolios.
- Event-driven licensing integration: Reusable APIs and microservices supporting create, update and upgrade flows with SAP/EMO integration, Kafka messaging and OAuth-secured APIs.

EDUCATION & CERTIFICATIONS

- Bachelor of Engineering (BE), Bharathiar University, 2000 - 2004
- Deep Learning in AI-driven Solutions, Indian Institute of Science (IISc), Bengaluru
- AWS Solution Architect Certification Programme

TECHNICAL SKILLS

Platforms & Architecture: LEM, Sentinel EMS/LDK, FlexNet, AWS, microservices, SOA, event-driven architecture, API management, webhooks

Languages & Frameworks: Java, Spring Boot, Python, C++, React, Next.js, Drools, PowerBuilder, REST APIs, SOAP

Integration & DevOps: Apigee, Kafka, RabbitMQ, Docker, Kubernetes, Jenkins, OAuth 2.0, Swagger/OpenAPI

AI & Data: GitHub Copilot, Microsoft Copilot, ChatGPT / GPT Models, prompt engineering, LangChain, Vertex AI, RAG, enterprise AI solutions, intelligent automation, deep learning, SQL, AI-assisted enterprise application modernisation

LANGUAGES

Tamil - Native | English - Proficient
